

Datasets and research questions for mini-Project

1

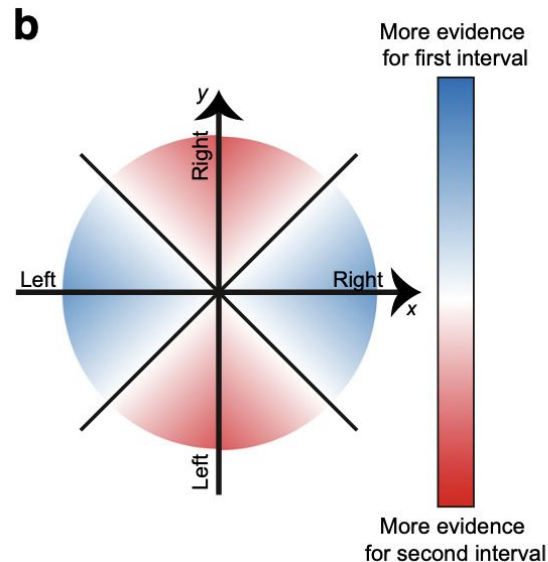

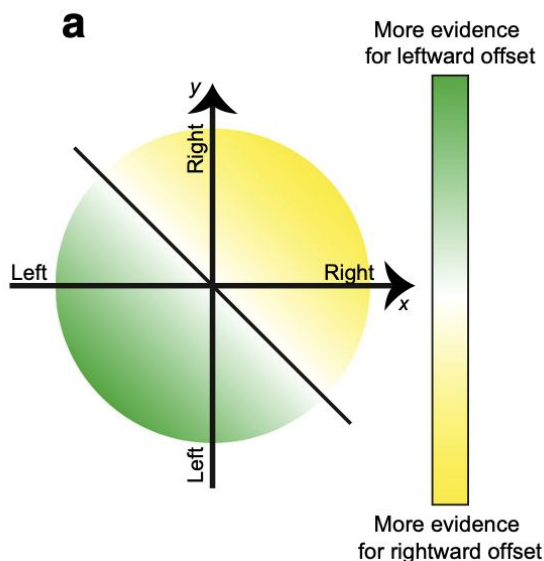

Perceptual decision-making

Project 1 - How do we make different decisions about the same information?

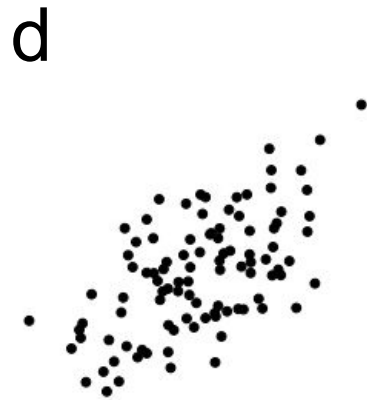

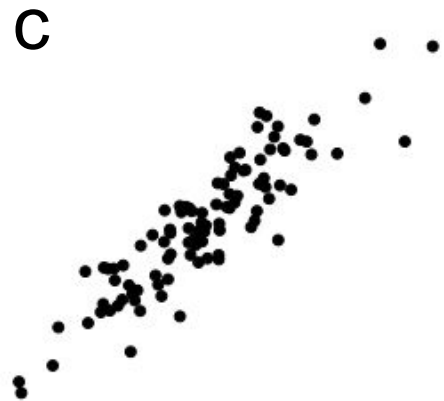

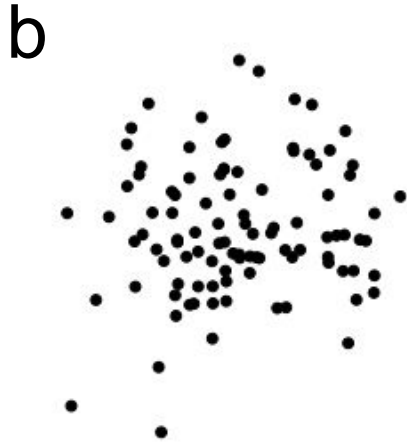

1. The same information provides different evidence depending on the nature of the decision
2. How to describe different kinds of decisions made about the same information
3. How computational models can be developed and compared to test sub-optimality affecting decision-making

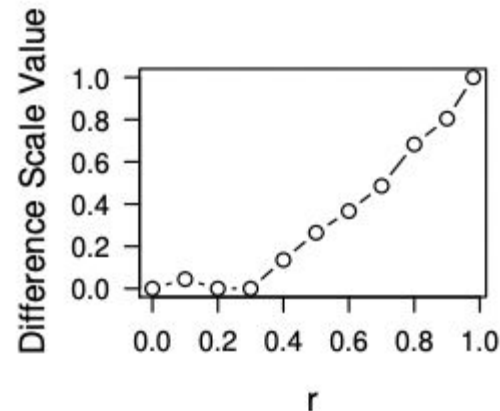

LINK

Project 2 - How is an objective variable experienced?

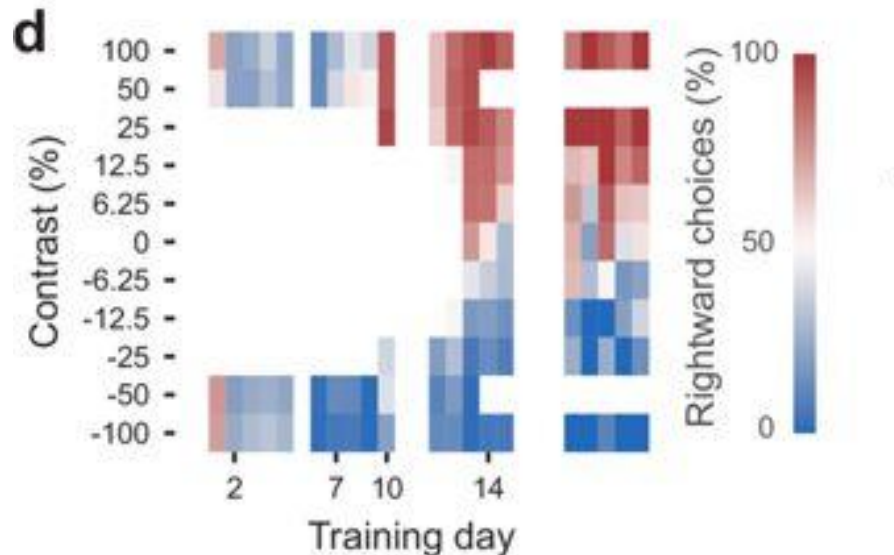

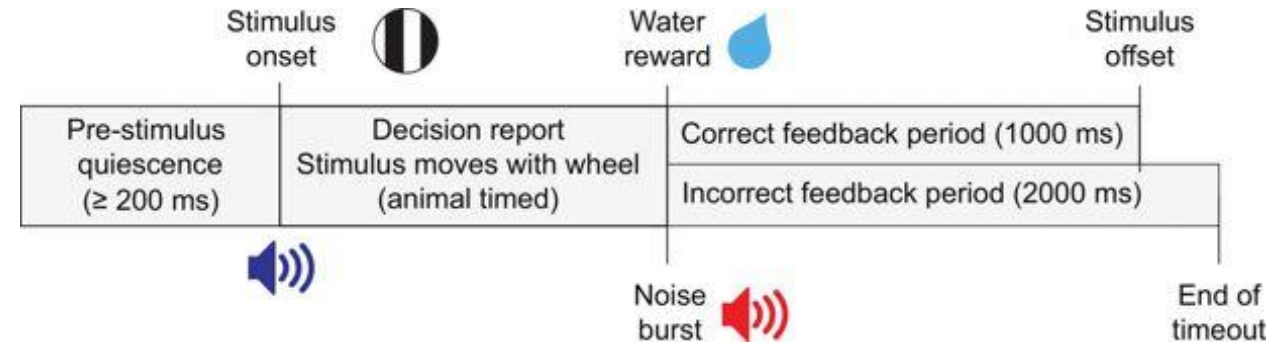

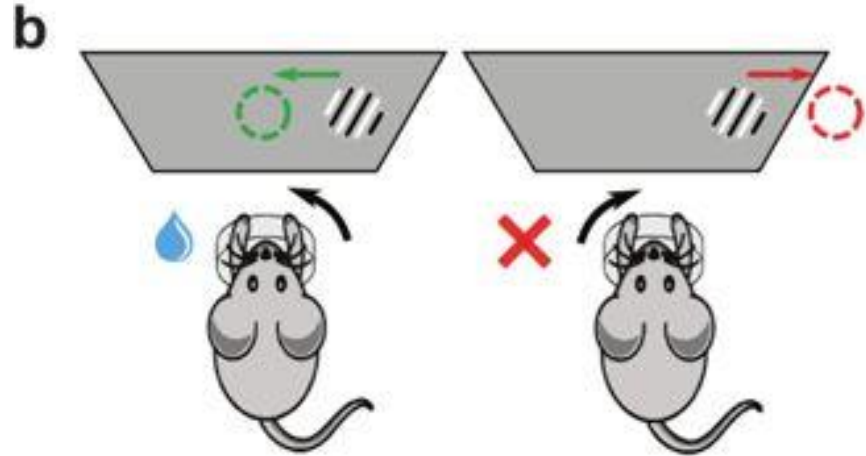

1. How to describe the internal signal providing evidence for a choice
2. How to constrain a model to make it identifiable
3. How to estimate the usefulness of a model for describing real data

knoblauch & Maloney, 2008

Project 3 - Do mice perceptual decisions follow accumulation-to-bound?

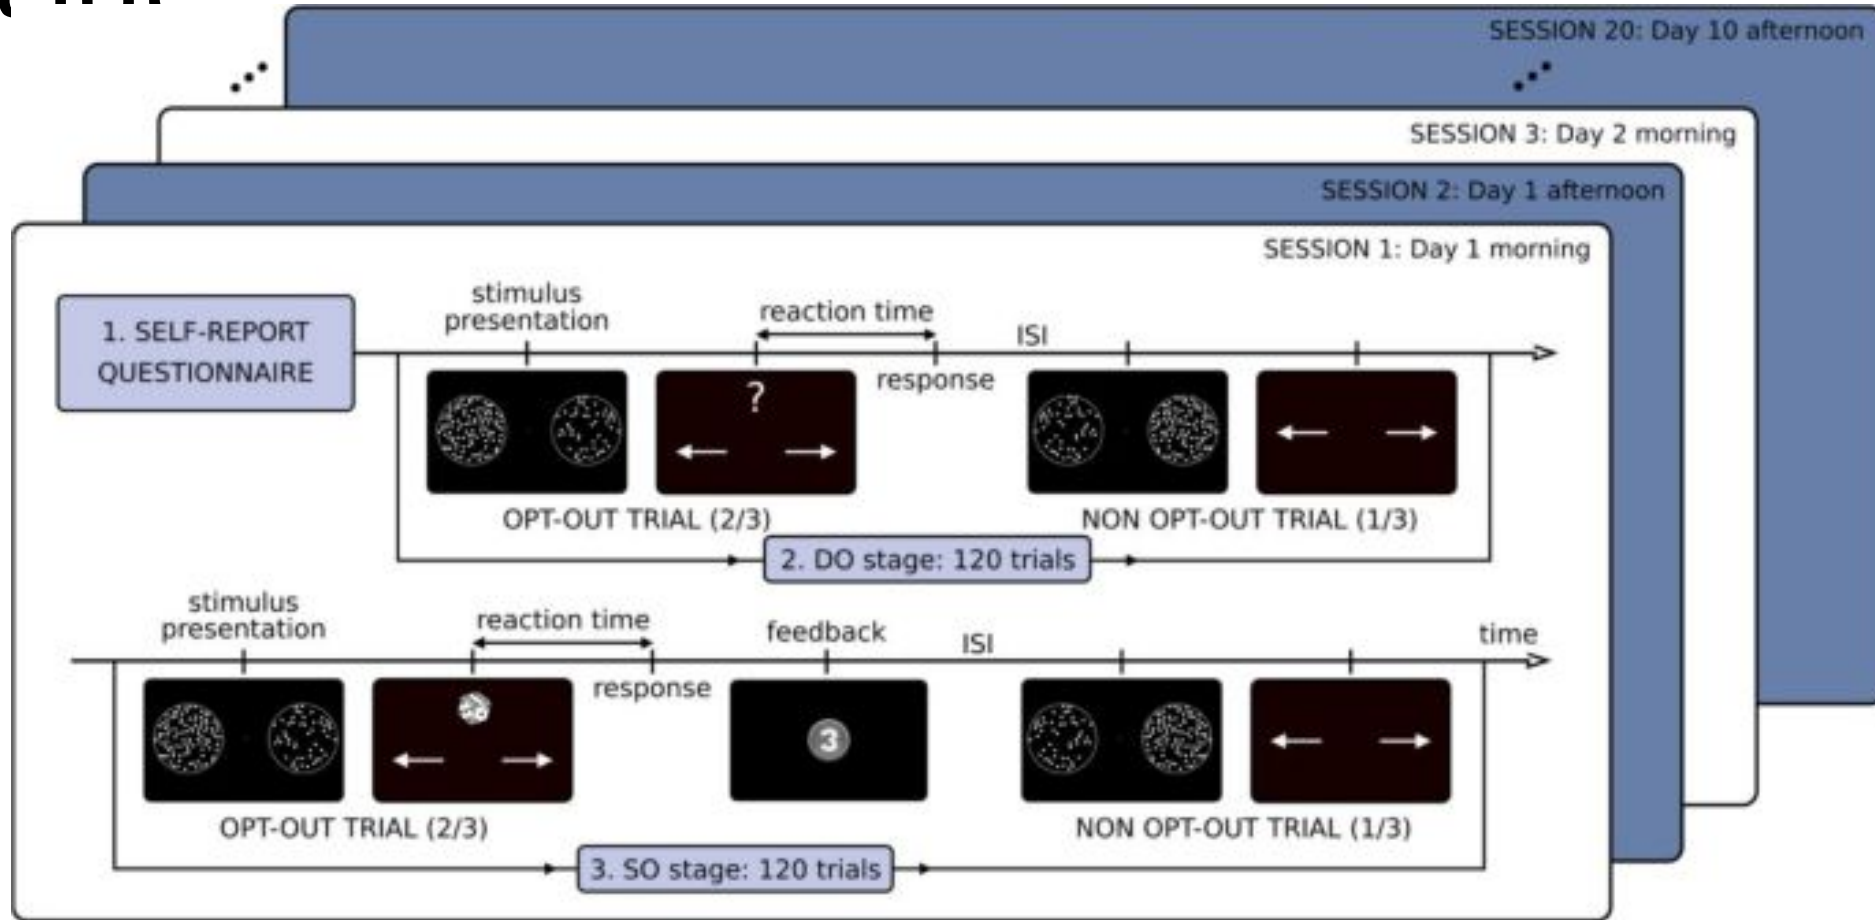

Dozens of animals, many millions of trials

Project 4 - How do mice integrate priors into perceptual decisions?

Project 5 - How do we decide not to decide?

27 subjects, 4560 trials each (in 20 sessions)

da Fonseca et al, 2023

Project 6 - How do we detect targets at multiple possible locations?
